Mr Superintendant
U. S. Mint
Phila Pa

Dr Sir We have discovered among our hills a Silver baring Ore but have no means of Testing its op- and have conceived the idea of sending five hundred or a Thousand pounds to you or the Mint for smelting reducing or whatever you term it so as to get the actual yield per Ton- That is if you are prepared for reducing the Crude ore- if not will you be kind enough to inform us how to proceed and where we can get the Crude ore reduced and its Metal properties of our ore tested to see whether it will pay or not- We feel so confident That our ore is valuable that we are willing to ship a quantity necessary to give it a fair trial- please write us how to proceed- and the amt needed to give a thorough test- and if you are not prepared for smelting from Crude state give us our nearest smelting works- We are 40 miles S.W. Louisville Ky.

Mr. Superintendent
U.S. Mint
Phila. Pa.

Dr. Sir

We have discovered among our hills a silver baring ore but have no means of testing its op- and have conceived the idea of sending five hundred or a thousand pounds to you or the Mint for smelting reducing or whatever you term it so as to get the actual yield pr you. That is if you are prepared for reducing the crude ore. If not will you be kind enough to inform us how to proceed and where we can get the crude ore reduced and its metal properties of our ore tested to see whether it will pay or not. We feel so confident that our ore is valuable that we are willing to ship a quantity necessary to give it a fair trial. Please write us how to proceed, and the amt. needed to give a thorough test and if you are not prepared for smelting form crude state give u our nearest smelting works. We are 40 miles S.W. Louisville K.Y.
